

Post-Operative Instructions

Quadriceps/Patella Tendon Repair

Activity

- Wear your **knee brace or immobilizer at all times** until seen in your post-operative visit.
- You can place your full weight on your operative leg (i.e. **weight bearing as tolerated**), you should use crutches for assistance.
 - **Never walk without your knee brace and crutches.**
- **Strict elevation of the operative knee for the first 72 hours will help decrease pain and swelling.**
 - Place the knee on pillows; your knee and foot must be elevated above the level of your heart.
 - **It is important that the pillows start at the top of your thigh.**
 - You may feel increased pain or pressure any time the knee drops below the level of your heart.
- Formal physical therapy will begin after your first surgical follow-up visit.

Pain Control

- You have been prescribed a pain medication that contains a narcotic. Do not drink alcohol, drive a car or operate heavy machinery while on this medication.
 - Do NOT take Tylenol (acetaminophen) while on this medication as it may cause an overdose.
- You may take anti-inflammatory medications such as Ibuprofen or Naprosyn (with food) in addition to the pain medication.
- Apply ice to the knee for 15 minutes as often as every hour. You may continue this for as many days as you like.

Wound Care

- **Do not remove your brace or surgical dressing. Keep them clean and dry.** They will be changed during your postoperative evaluation.
- Sponge baths with assistance are recommended.
- You may experience slight bruising and swelling to the operative leg.

Follow-up Appointment

- Your follow-up appointment should be 10-14 days after surgery, please call the office if you do not have an appointment. We will review the findings from your surgery and remove your sutures during this visit.
- Please call the office with any questions or concerns, or if you experience any of the following: fevers (greater than 101°F), chills, increased numbness, swelling, pain, redness or increasing drainage at the incision.
